

Technical Notes:

1. Catalyst for the synthesis of acyclic epoxy alcohols and allylic epoxy alcohols.
2. Useful for diastereoselective reduction of alpha-fluoroketones.
3. Catalyzes the asymmetric allylation of ketones.
4. Reagent for the synthesis of cyclopropylamines from aryl and alkenyl nitriles.
5. Useful for racemic and/or enantioselective addition of nucleophiles to aldehydes,<sup>6</sup> ketones,<sup>7</sup> and imines.<sup>8</sup>
6. Catalytic intramolecular formal [3+2] cycloaddition.
7. Catalyst for the synthesis of cyclopropanols from esters and organomagnesium reagents.
